

# Beat the heat this summer!

---

Summer is here and the temperature is rising. It's that time of the year when we retreat to air conditioned comfort whenever we can.

A simple flick of the switch and our comfort is assured. Or is it?

As the temperature rises, so does the load on your cooling systems. Air conditioner and refrigeration units are mechanical devices and as such need to be maintained in peak condition.

There has never been a better use of the expression that “prevention is better than a cure” when applied to your cooling equipment.

A simple filter clean to a check on the gas charge in the unit could be all that's needed to assure a trouble free summer of comfort.

At Wired Air we have the know-how and the equipment to keep your cooling system in prime working order. From a simple split system air conditioner to a display fridge full of expensive wine, we have the experience to spot trouble before it causes a major breakdown.

So, for your peace of mind this summer, call us and have your air conditioning and refrigeration systems serviced before you have a breakdown.
