

# A Cut above the Rest

---

Modern construction techniques are usually based around the use of concrete.

New houses and apartment blocks all rely on a significant amount of concrete components.

This creates a problem when additions and renovations are required.

Traditionally concrete has had to be cut with noisy petrol powered saws that produce dust and dangerous exhaust fumes.

**At Wired Air we have the Husqvarna Electric Dustless Concrete Cutting Saw.**

With a 350mm diamond blade and a capacity to cut a depth of 125mm this unit is ideal for indoor use. Add to that a self contained water supply and we have the ability to go anywhere. Be it an air conditioner in a 12<sup>th</sup> floor apartment, a new power point in the middle of a retail store or a cut across a driveway for a new electric gate, our equipment can do the job.

With the latest equipment and on site experience it may be that the job you thought impossible could be achievable.

If you will only accept a cut above the rest then give us a call on
